

Carolina eHealthNetwork

in partnership with the South Carolina Medical Association

Carolina eHealth Network stores data obtained from connected electronic health records (EHRs) in an enterprise data warehouse, then aggregates the data in meaningful ways to provide your ACO/CIN with advanced clinical data analytics.

CONNECT.
ANALYZE.
ENGAGE.
TRANSFORM.

Carolina eHealth Network presents your ACO/CIN with actionable business intelligence based upon aggregated clinical data which better positions your organization to:

- Identify polychronic patients, gaps in care, 30-day readmission trends, emergency department utilization, and more.
- Improve quality metrics through targeted dashboards that identify patients in need of preventive care and wellness exams.
- Alert care coordinators when attributed patients are admitted to the Emergency Department/Inpatient or discharged.
- Identify high risk/high cost patients to help lower costs and increase shared savings through early intervention and informed care coordination.
- Employ NCQA-certified clinical data from the enterprise data warehouse to pursue increased value-based care reimbursement contracts from payers.
- Easily compute eQMs across the ACO/CIN using an ONC-certified product.
- Facilitate complete diagnosis coding which supports accurate risk adjustment scores for patients.
